

Compare FusionAuth to Cognito

Cognito is part of the Amazon Web Services family and provides a registration and login tool that connects your user' data to the wider Amazon data processing and advertising network. FusionAuth takes a different approach with a full-service platform that gives you control of your own users and data. This contrast in perspective explains many of the differences between Amazon Cognito and FusionAuth.

Installing in minutes, FusionAuth gives you all the advanced features you need for a quick start-up and is ready to grow with you as you scale to millions of users. All free for unlimited users. Seriously.

Use the chart below to compare our features and read more in our [API documentation](#).
