

Compare FusionAuth to Ping Identity

FusionAuth and Ping Identity are both web-scale identity platforms designed to register and manage an unlimited number of users. Both provide common CIAM features including multi-factor authentication (MFA) and single sign-on (SSO) across multiple applications and devices. One difference FusionAuth's on-prem and cloud versions are true single-tenant solutions. Read more about why this is essential in this [whitepaper on single- and multi-tenant platforms from our friends at Inversoft](#). Another major difference is FusionAuth is free for unlimited users. Seriously.

Use the chart below to compare all the other features of FusionAuth and Ping Identity, and get complete details from our [API documentation](#).
